FireLocator 2.5.1 Release Notes (Beta 1.5)

(Firelocator.net)

Sherif Ahmed
3/16/2009

➤ **Feature : Australia**

- Visibility of Sentinel Incidents can be controlled based on the “Probability” of a hotspot being a wildfire*. See figure below.

➤ **Bug Fix: Australia & US**

- A couple of issues related to Map Navigation have been resolved, e.g. Map Zoom not responsive at times when the side-panel is in expanded state.

*1: Note that Sentinel hotspots, represent locations with some sort of heat source on the ground. These attributes are flagged by a confidence factor ranging from 0% to 100%, indicating the probability of the location being an actual wildfire.
